## SNAGI- $\beta$ Online database of Sino Agrochemicals

Agranova produces technical and commercial information on the global agrochemical industry and its products. During the past five-eight years, its activities have increasingly focussed on the emergence of China as a producer of active ingredients. Understanding the production of these chemicals is a challenge for companies based in Europe and the Americas.

Over the recent past, Agranova has spent much effort in gathering information on the companies, the technologies they operate, their production capacities and exports. It has expended even more time and effort maintaining this information as up-to-date as possible.

It has been using an internal database (called SNAGI) of Chinese company and product information for several years and recently decided that it should share this information with interested clients. Although the company profiles in SNAGI is still not complete, which is why we call it a  $\beta$ -version, the following data is readily searched using our simple, but elegant, interface:

- Registrations of technical compounds (TCs) lodged with the Chinese regulatory agency, ICAMA (mainly 1-year (LS) and 5-year (PD) certifications)
- Names and locations of over 900 companies holding these registrations and validity information
- Lists of company TCs (888 currently listed), together with (in many cases) basic contact details and names in Chinese as well as English. Note that only the Chinese name has legal validity in China.
- An interactive map that allows information to be searched by Chinese provinces

The database is available online at Agranova's online services website ([www.a2os.com](http://www.a2os.com)) and can be quickly searched after entering a username and password.

**The introductory price for an annual subscription is GBP 750.00**

## List of other Agranova publications

**Ag Chem New Compound Review** (<http://www.agranova.co.uk/ncr.asp>). The annual summary of new crop protection agents and technologies that has tracked crop protection R&D since 1982. Published every April, over 350 compounds and biological agents are usually profiled, between 60-70 of which are new entries each year. Updated six months later every October by the **Ag Chem Supplementary Report** (<http://www.agranova.co.uk/suprep.asp>).

**Ag Chem Base** (<http://www.agranova.co.uk/acb01.asp>). A database containing technical profiles of all commercial and developmental crop protection technologies (chemical and biological). This easy to install and use database is the most exhaustive one of its kind available. Information can be selected and presented in a flexible way and then manipulated using a simple but powerful interface. It is updated twice a year. *It is also available as an internet version* (<http://www.agranova.co.uk/acbonline.asp>).

**Agrochemicals - Executive Review** (<http://www.agranova.co.uk/awa10.asp>). Published every February, the Executive Review presents estimates of the international agrochemical industry's previous year's results. As well as this timely global industry update, profiles of the world's major companies, their products and leading country markets are presented in a compact and readable bound book (also available online and as an Acrobat pdf).

**Crop Protection Actives** (<http://www.agranova.co.uk/pp/cpa5.pps>). This database of global commercial AIs was first published by Agranova in July 2005, having evolved from Crop Sector Reviews (begun in 1998). It provides basic AI profiles, application breakdown by major crop, the last ten years' sales values and consumption volumes, regulatory status in the EU and the USA and AI price estimates. Very easy to use, the database presents profiles on over 650 commercial active ingredients.

**Alliance Service** (<http://www.agranova.co.uk/agal2000.asp>). By combining all the publications of the Agranova Alliance into a annual single package customers can be certain to have the very latest information on the industry, its products and its markets at their fingertips. The ultimate solution to your crop protection industry information and competitor intelligence needs. Consists of a combined online access, bound reports and CD-ROM databases and includes additional consulting support.
